Vista Village Park - ASLA Award of Merit

The practice of landscape architecture influences the way people perceive and experience their communities. People are attracted to places that are aesthetically pleasing, unique, comfortable, accessible and safe. RBF Landscape Architects are dedicated to shaping such places through context-sensitive design solutions that are innovative, environmentally sensitive and individualized for each project.

Whether working with community members, civic leaders, city staff or a private landowner, RBF's LEED® Accredited Landscape Architects believe that successful projects begin with strong foundations. A thorough understanding of local values and history, and comprehensive knowledge of the physical site constraints are essential to achieving design consensus, acceptance and ultimately, implementation.

RBF Landscape Architects are mindful of community resources and respectful of the principles of sustainable design and green building. Long term economic, maintenance and lifestyle impacts are thoroughly considered with each project.

RBF Landscape Architects provide these services and achieve this balance with the support of hundreds of leading professionals in the disciplines of urban design, planning, environmental services, civil engineering and construction management.

RBF Landscape Architects successfully combine the art of creativity with the science of engineering to develop design solutions that are embraced, implementable, beautiful and enduring.
