RBF Consulting applies depth of expertise and experience to help clients comply with state and federal stormwater quality regulations for construction projects, and provide training on stormwater quality issues to public agencies, contractors and developers.

Stormwater quality regulations continue to evolve at both the state and federal levels, and RBF is in the forefront of meeting these new requirements. The latest changes adopted by the California State Water Resources Control Board include a new Construction General Permit that places all construction projects of one acre or more into one of three risk level categories based on their likelihood to have water quality impacts. Each risk level has different effluent monitoring and testing requirements that can result in cost impacts if not properly addressed.

Other changes include new requirements regarding who can prepare and monitor Stormwater Pollution Prevention Plan (SWPPPs) to help meet construction stormwater runoff effluent limitations, new standards for post-construction stormwater design, and protocols for submitting all required documents.

At the local, state and national levels, RBF is working with clients to meet the new standards and with regulators to help implement new stormwater requirements. With Certified Professionals, including Qualified SWPPP Developers and Practitioners, RBF is recognized nationally for leadership in all aspects of stormwater management.

## SERVICES

*RBF Consulting provides assistance to ensure compliance with the Construction General Permit through:*

### **Training**

RBF provides current information on regulatory requirements through onsite training for office and field personnel or field training.

### **Construction Site Inspection**

RBF provides Storm Water Pollution Prevention Plan (SWPPP) review and inspection of SWPPP implementation in the field.

### **Stormwater Pollution Prevention Program Preparation**

RBF assists with the preparation of SWPPPs, Rain Event Action Plans, and other field documentation.

### **Site Operation**

RBF assists in site operation, including stormwater sampling data collection and results interpretation; response to requests or notices from regulators; coordination of annual compliance reporting; and site documentation.

### **Post-Construction Stormwater Quality Design**

RBF works with clients to determine if a project will be required to meet Construction General Permit post-construction stormwater quality standards, perform stormwater quality design or review, and advise on methods to meet the necessary requirements.

### **Best Management Practice Implementation**

RBF assists with BMP implementation with erosion and sediment control recommendations, and contractor coordination.
