In the 21st Century, regional mobility is a critical quality of life issue. Developing multi-modal solutions to our growing transportation needs requires an integrated systems approach tying together all modes to better manage transportation issues.

RBF Consulting (RBF) possesses the expertise in environmental and visual analysis, funding and financing, planning, engineering design, agency partnering and community consensus building to develop an integrated multi-modal transportation system. RBF offers these consulting services in an innovative, timely, cost-efficient manner to public and private clients, as well as public / private partnerships in the transportation sector.

From initial concept development through final design, construction management, and operation of the facility, RBF provides a solution-oriented approach to meet our clients transportation consulting needs.

RBF offers a highly capable multi-disciplined team that covers the professional service disciplines needed to deliver successful transportation facility improvements.

RBF has received numerous awards that recognize our achievements for the successful planning and design of transportation projects. These awards have been for notable major transportation facility projects that have greatly improved public mobility and include: I-5 / I-405 Interchange (El Toro "Y"), the Eastern Transportation Corridor Toll Road (SR-241, SR-261), Newport Coast Drive and MacArthur Boulevard Widening.
